Art Unit: 3739

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Christopher W. Brown on December 10, 2004.

The application has been amended as follows:

In the claims:

In claim 1, line 21, "beams;" has been replaced with – beam; --.

The following is an examiner's statement of reasons for allowance: The claims are allowable over the art of record due to the recitation of sighting adjustment means including a movement means; a sighting state detection means; a movement detection means; a determination means for determining a direction of the optical axis direction in which the sighting point is to be moved based on the results detected by the sighting state detection means and the movement detection means; and movement control means. The prior art determines the focal state by processing data from an image pickup and dynamically reducing the error signal from a comparator which compares the image pickup signal with a desired image signal (see Taboada et al) there is no additional physical sensor such as the movement detection means, which is expressed as a potentiometer 9 discussed on page 8, lines 10-19 or the instant disclosure.

Art Unit: 3739

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
